TITLE

Login Page Using HTML & JavaScrip

Simple front-end authentication system

Uses HTML tags and JavaScript validation

Redirects user after successful login

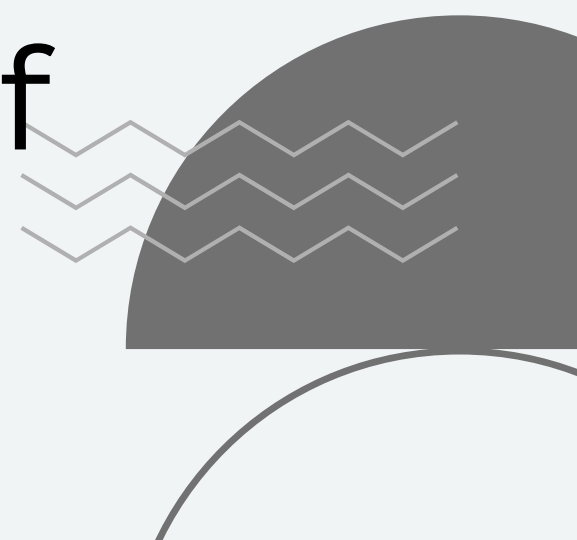

OBJECTIVE

Create login form using `<form>`

Accept user input via `<input>`

Validate credentials using JavaScript

Redirect using `window.location.href`

LOGIN PAGE STRUCTURE

Tags used in login.html:

`<form>` → input container

`<input type="text">` → username

`<script src="script.js">` → links JS

`<button>` → login action

`<input type="password">` → password

Purpose: Collect user credentials

JAVA SCRIPT VALIDATION

Function: loginCheck()

Key code elements:

document.getElementById() → get values

.value → read input

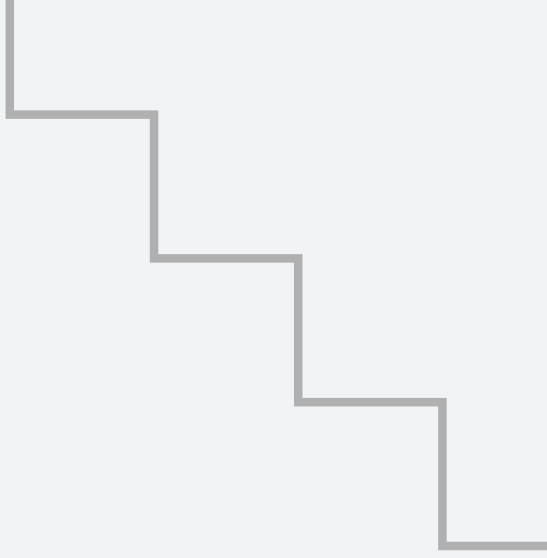

alert() → show message

if (user=="admin" && pass=="1234")

window.location.href → redirect

LANDING PAGE

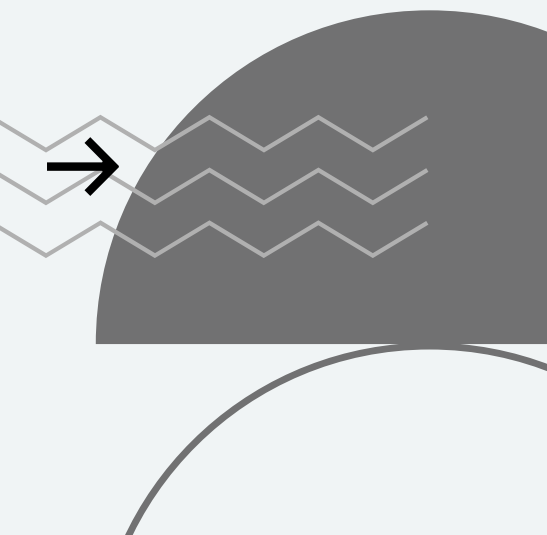

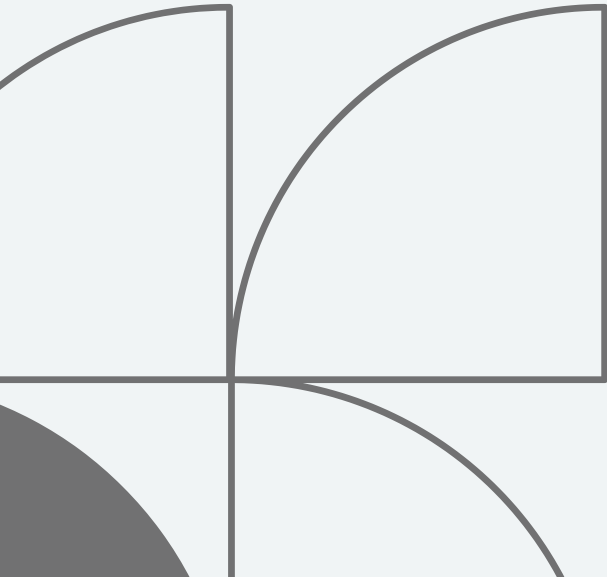

Tags used in landing.html:

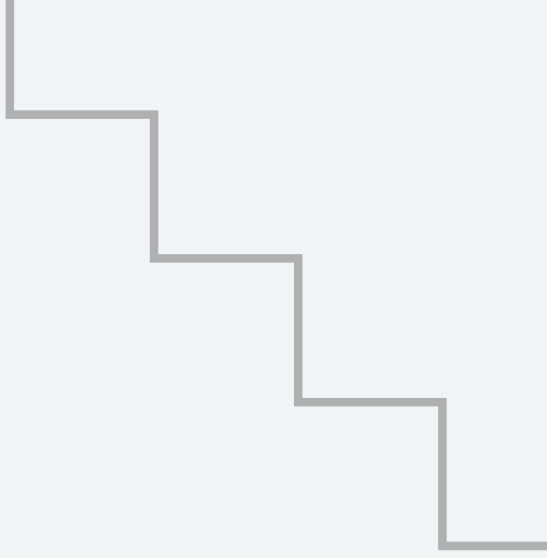

`<h1>` → welcome message

`<p>` → login confirmation

`<img>` → image gallery

`<body>` Shown after successful login →
page content

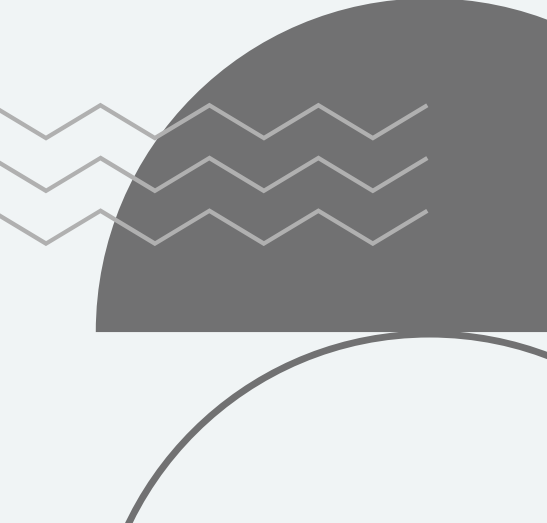

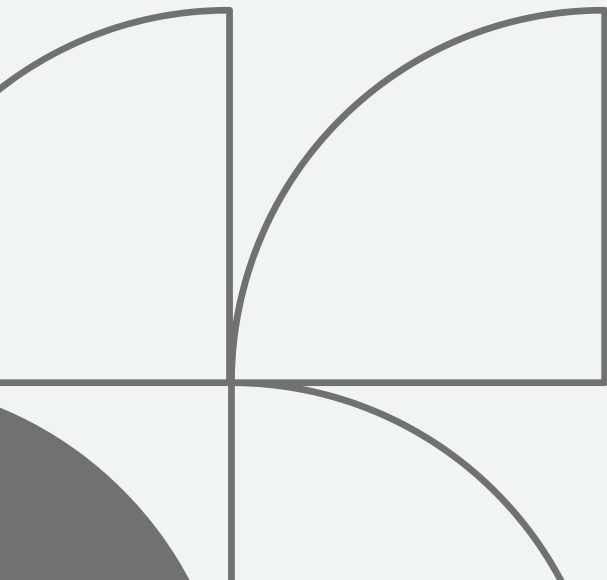

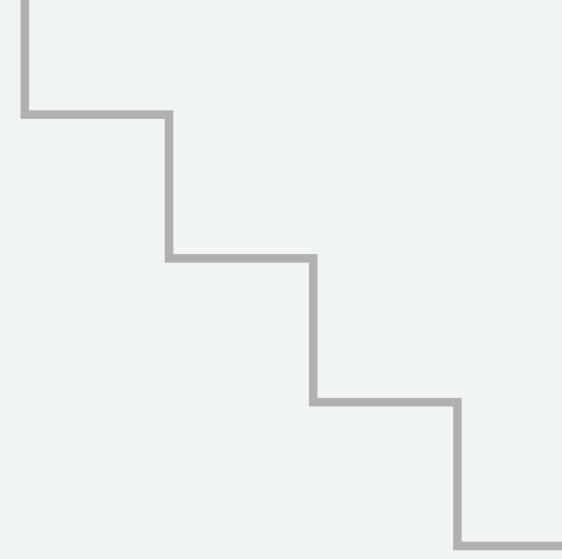

CONCLUSION

Demonstrates basic login system

Uses HTML and JavaScript effectively

Can be improved with database and CSS
