

REACT SINGLE PAGE LAYOUT

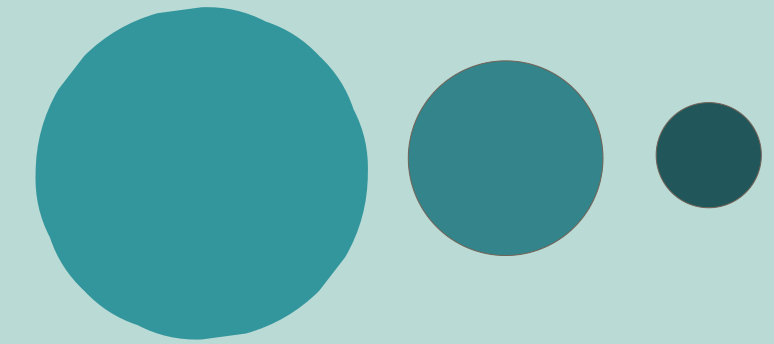

BY:V.MAHARANI
I BCA-A

INTRODUCTION

- React is a JavaScript library for building user interfaces.
- It uses reusable components.
- Single Page Applications (SPA) load content without refreshing.
- Provides fast and smooth user experience.
- Used for modern web development.

OBJECTIVE

- Create a simple website using React JS.
- Demonstrate component-based architecture.
- Implement navigation within a single page.
- Display information in organized sections.
- Understand React fundamentals.

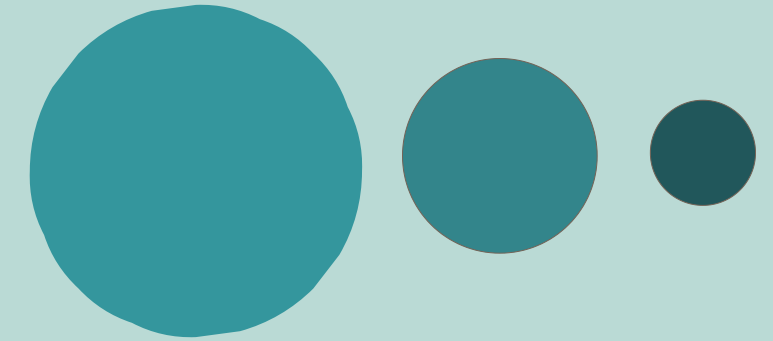

FEATURES

- Responsive Header Section
- Navigation Menu (About, Services, Contact)
- About Us Information Section
- Services Listing Section
- Contact Information Section
- Footer with Copyright

COMPONENTS USED

- App Component – Main component of the website.
- Header – Contains title and navigation links.
- About Section – Displays website information.
- Services Section – Lists available services.
- Contact & Footer – Shows contact details and copyright.

TECHNOLOGY USED

- React JS – Builds the user interface.
- JavaScript (ES6) – Adds functionality.
- JSX – Combines HTML and JavaScript.
- HTML – Creates webpage structure.
- CSS – Styles the webpage.

CONCLUSION

- **Successfully developed a React Single Page Website.**
- **Learned React components and JSX.**
- **Implemented navigation and styling.**
- **Improved frontend development skills.**
- **Built a simple and user-friendly interface.**

The background is a light teal color with abstract geometric shapes. In the top left, there is a pattern of squares with rounded corners. On the right side, there are large, overlapping circular and semi-circular shapes in a darker teal color. The text "THANK YOU" is centered in a dark teal, serif font.

THANK
YOU
