

DIGITAL CLOCK

BY:
V.MAHARANI
I BCA-A

INTRODUCTION

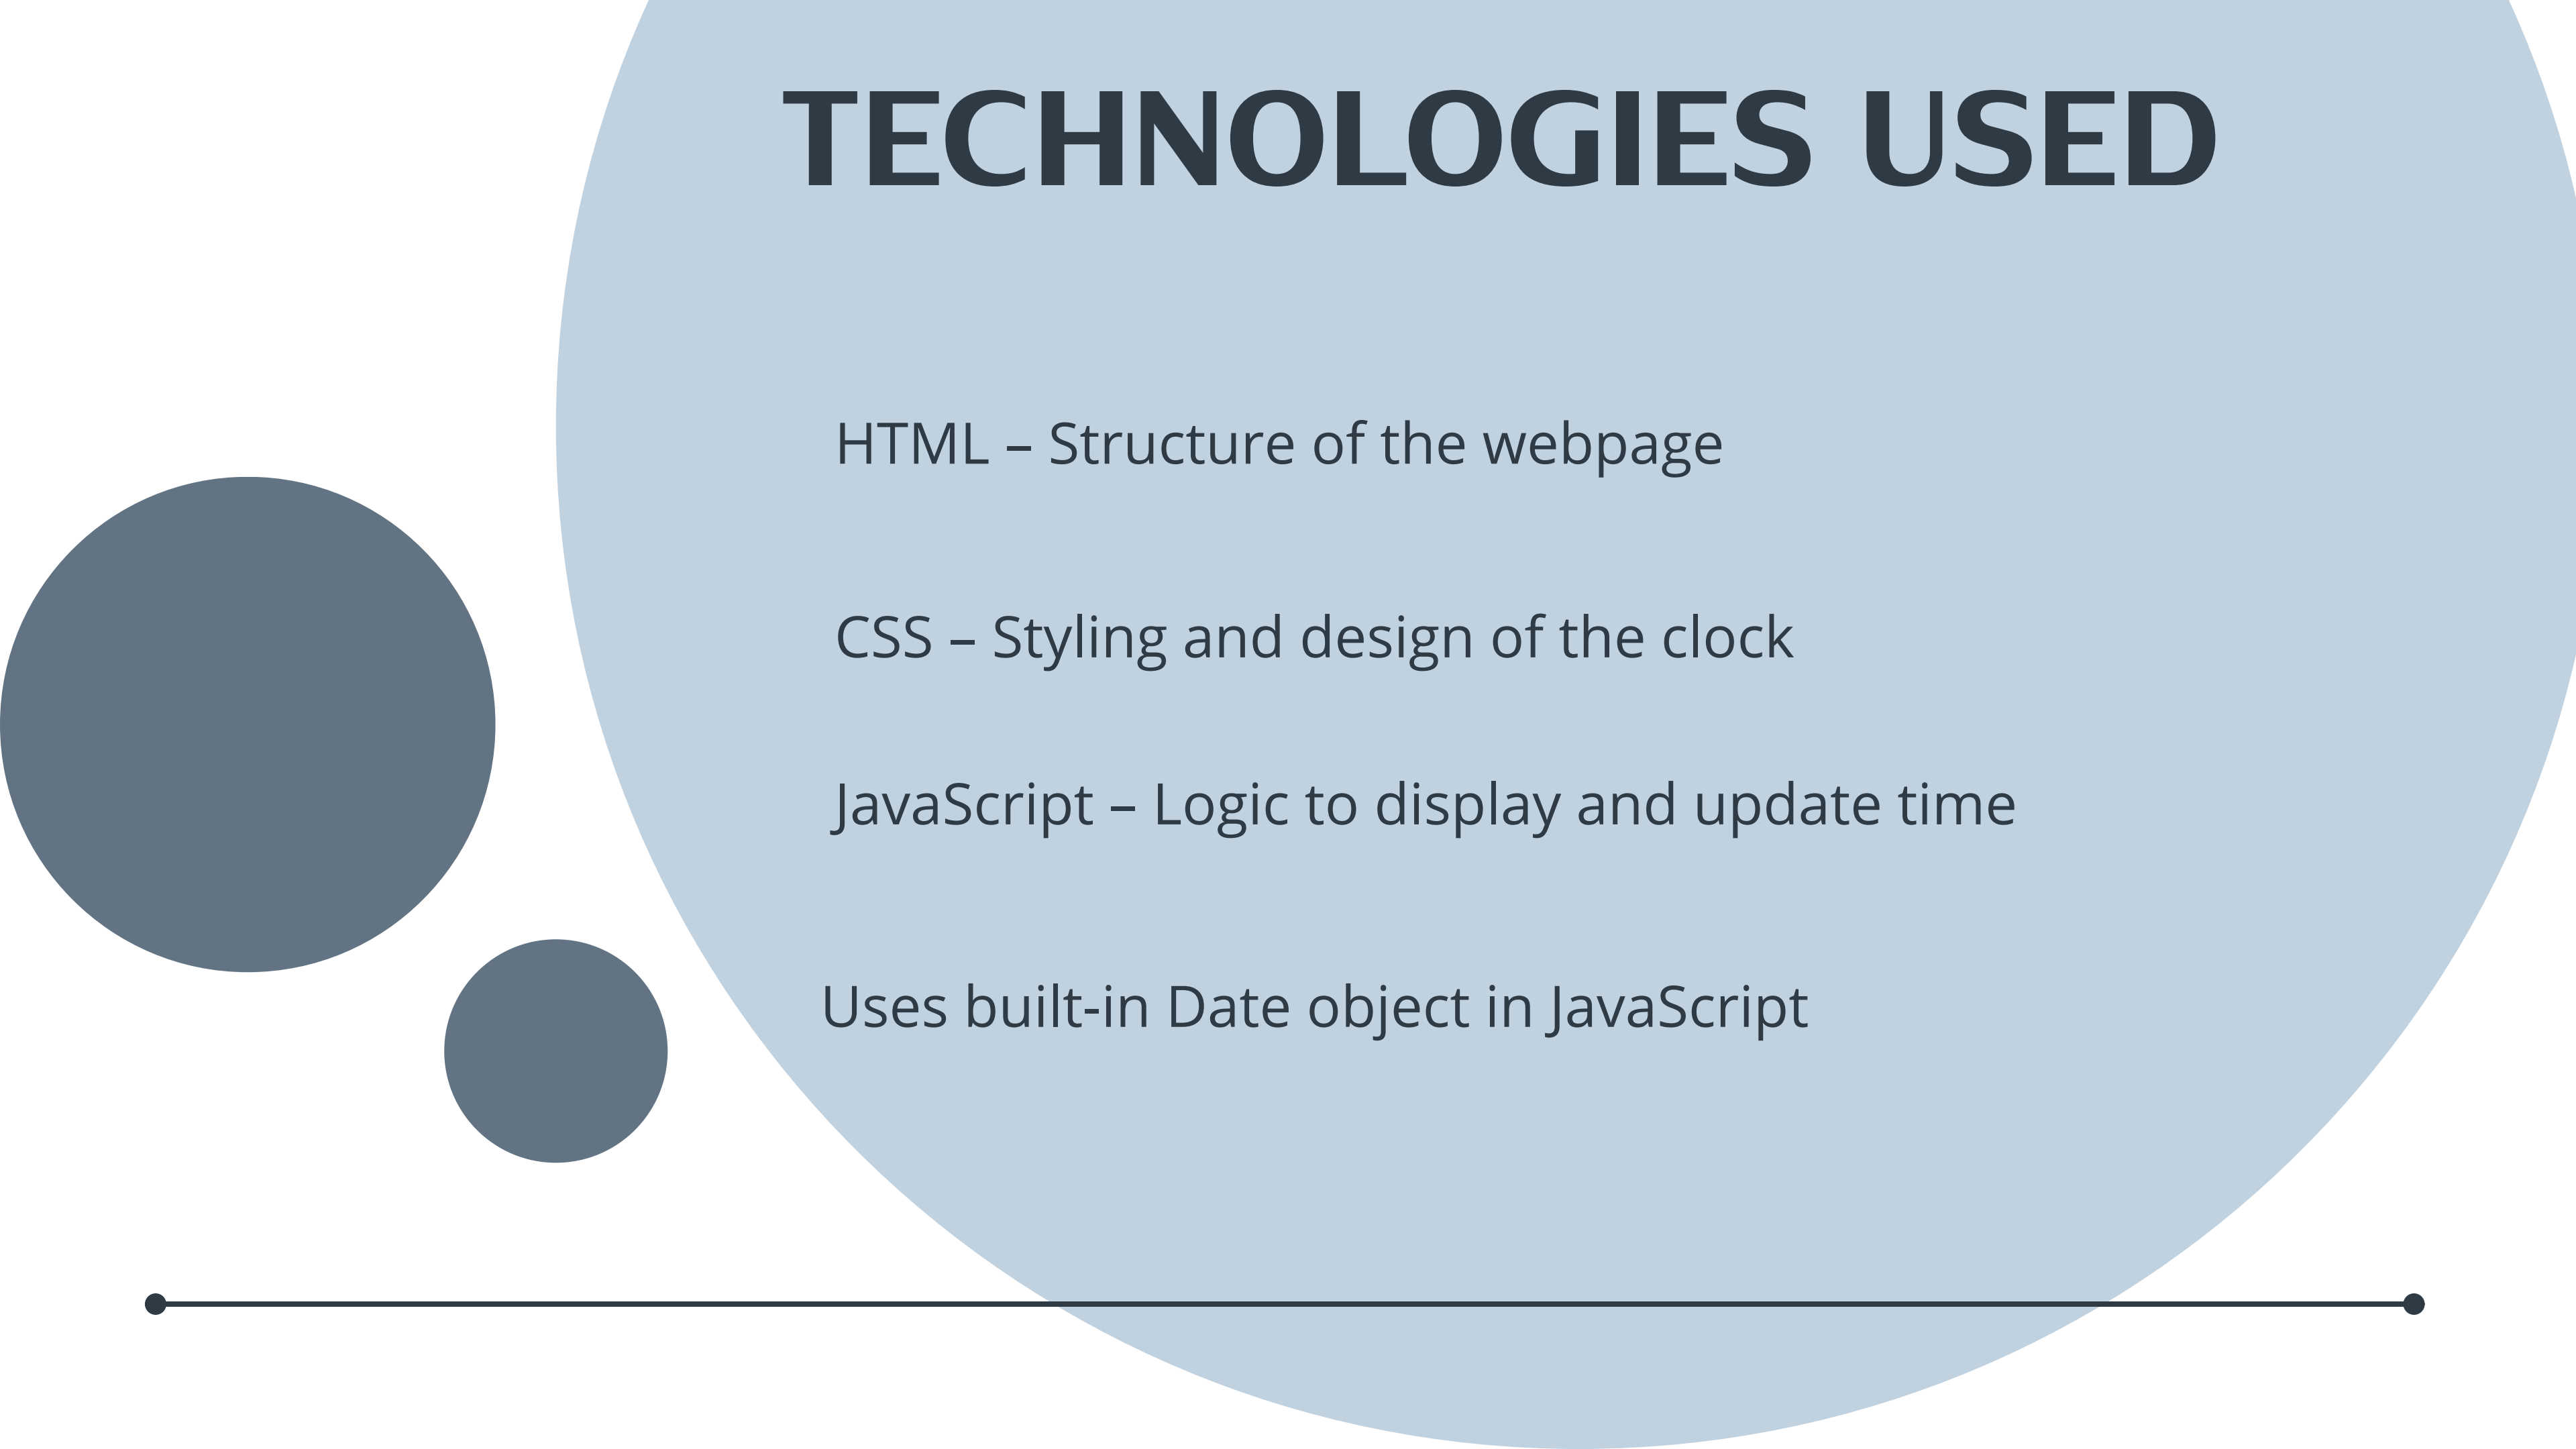

A digital clock displays time in hours, minutes, and seconds

Built using web technologies: HTML, CSS, and JavaScript

Updates time automatically every second

Useful for learning real-time web applications

TECHNOLOGIES USED

HTML – Structure of the webpage

CSS – Styling and design of the clock

JavaScript – Logic to display and update time

Uses built-in Date object in JavaScript

HTML STRUCTURE

Basic webpage layout using HTML

`<div>` used to display the clock

`<h2>` used for title

`id="clock"` helps JavaScript access the element

CSS STYLING

Dark background for modern look

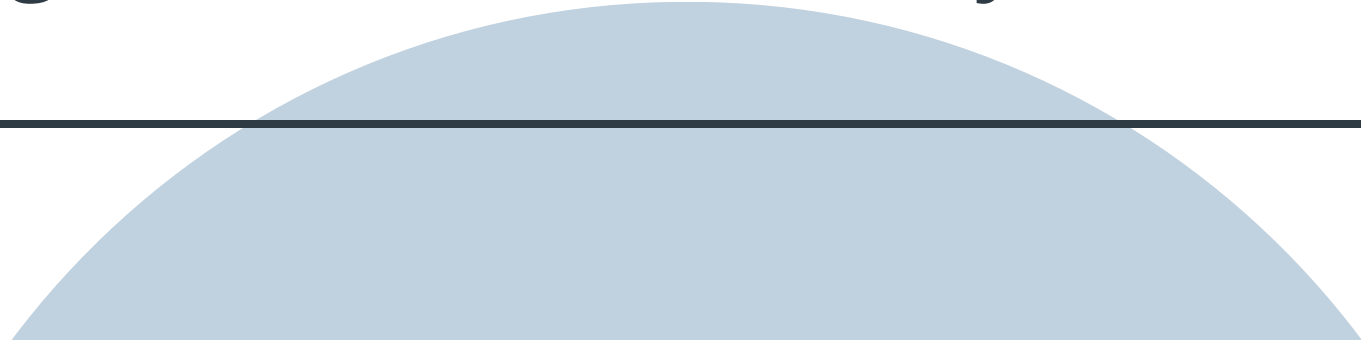

Center alignment using flexbox

Clock box styled with:

Padding and border-radius

Glow effect using box-shadow

Large font size for visibility

JAVASCRIPT FUNCTIONALITY

Date() object gets current time

Extracts:

Minutes

Hours

Seconds

Adds leading zero for single digits

setInterval() updates time every 1 second

CONCLUSION

Simple and effective real-time project

Helps understand DOM manipulation

Demonstrates use of JavaScript timing functions

Can be improved with:

- AM/PM format

- Date display

- Custom themes
