

EVENT HANDLING

BY :V.MAHARANI
I BCA-A

INTRODUCTION

JavaScript event handling is used to respond to user actions on a webpage

It makes websites interactive and dynamic.

Examples of events include clicking buttons and moving the mouse

PURPOSE

- Event handling helps webpages react to user activities.
- It improves user experience and interaction.
- Developers use events to perform actions automatically.

CLICK EVENT

- The click event occurs when the user clicks a button.
- In this program, clicking the button displays a message on the webpage
- The onclick event is used for this action.

MOUSE EVENT

- Mouse events occur when the mouse interacts with webpage elements
- `onmouseover` changes the background color when the mouse moves over the button.
- `onmouseout` restores the original background color when the mouse leaves the button.

STYLING AND DESIGN

- CSS is used to improve the appearance of the webpage.
- The webpage uses centered text, styled buttons, and background colors.
- Styling makes the webpage attractive and user-friendly.

CONCLUSION

- JavaScript event handling creates interactive webpages.
- Events allow webpages to respond instantly to user actions.
- It is an important feature in modern web development.

Abstract geometric shapes in blue and grey. A large dark blue shape is in the top left, a light blue shape is in the bottom left, and a medium blue shape is in the bottom left corner.

THANK YOU
