INTRODUCTION

Form validation ensures correct user input

Prevents invalid data submission

Improves user experience

Can be done using JavaScript

Example: Registration form validation

TECHNOLOGIES USED

HTML – Structure of the form

CSS – Styling the form layout

JavaScript – Validation logic

Input fields:

Name

Email

Phone Number

FORM DESIGN

Form is placed inside a container

Centered using margin

Styled with:

- Padding

- Box shadow

- Full-width input fields

Simple and user-friendly UI

VALIDATION LOGIC

JavaScript function: `validateForm()`

Checks:

- Name should not be empty

- Email must follow proper format

- Phone number must be 10 digits

Uses:

- `getElementById()`

- Regular expressions (email pattern)

- Displays alert messages

CONCLUSION

Form validation improves data accuracy

Reduces errors in user input

Easy to implement using JavaScript

Can be extended with more validations

Useful in real-world applications

THANK YOU
