

CALCULATOR

BY:V.MAHARANI
I BCA-BATCH I

INTRODUCTION

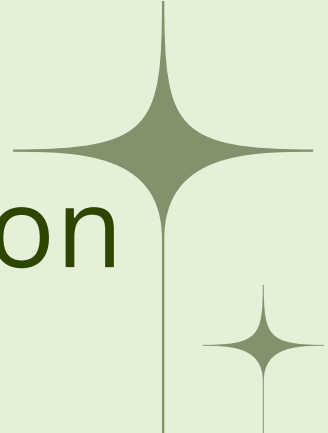

A calculator is a web-based tool used for basic arithmetic operations

This project is created using:

- *HTML (Structure)
- *CSS (Design)
- *JavaScript (Functionality)

Performs:

- *Addition, Subtraction, Multiplication, Division
- 

OBJECTIVE OF THE PROJECT

To design a simple calculator interface

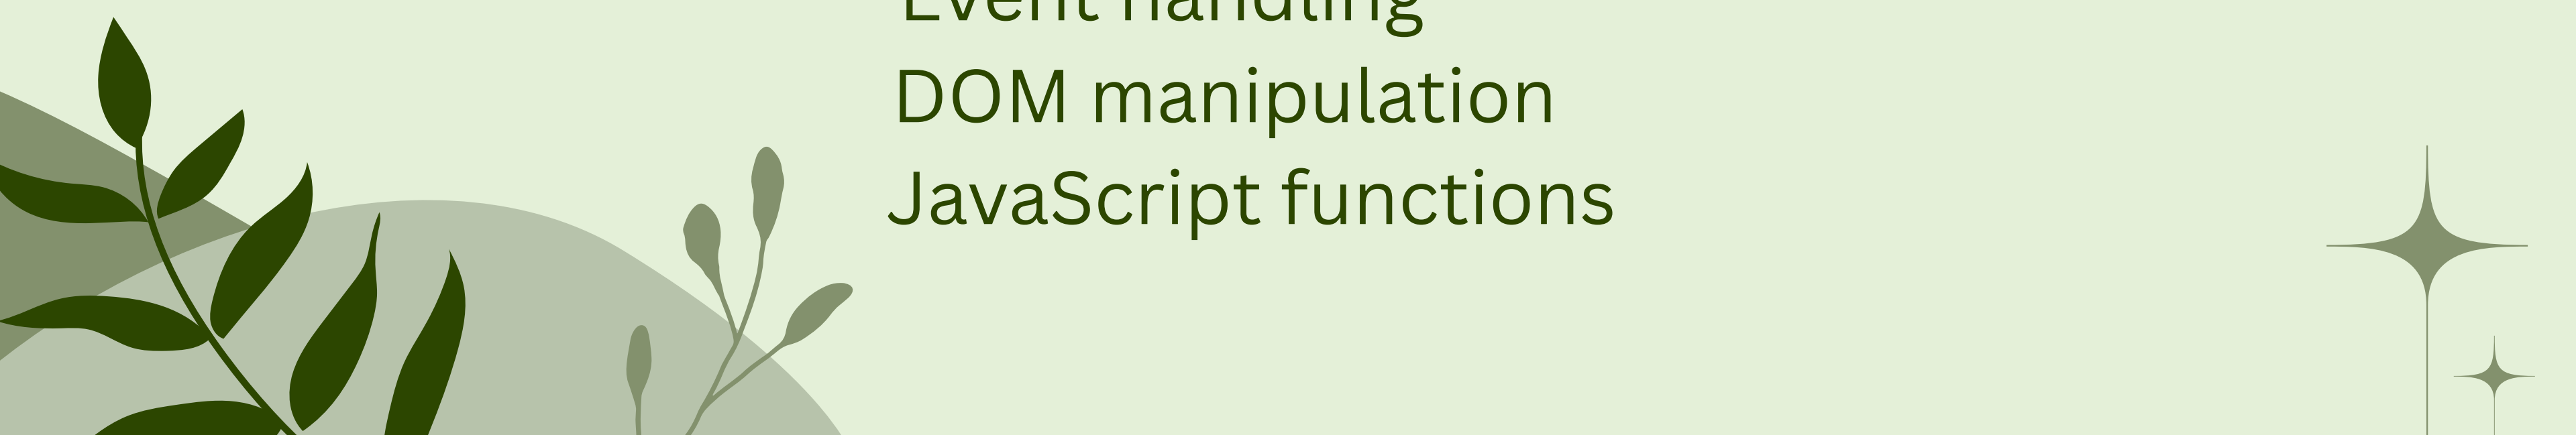

To perform basic calculations

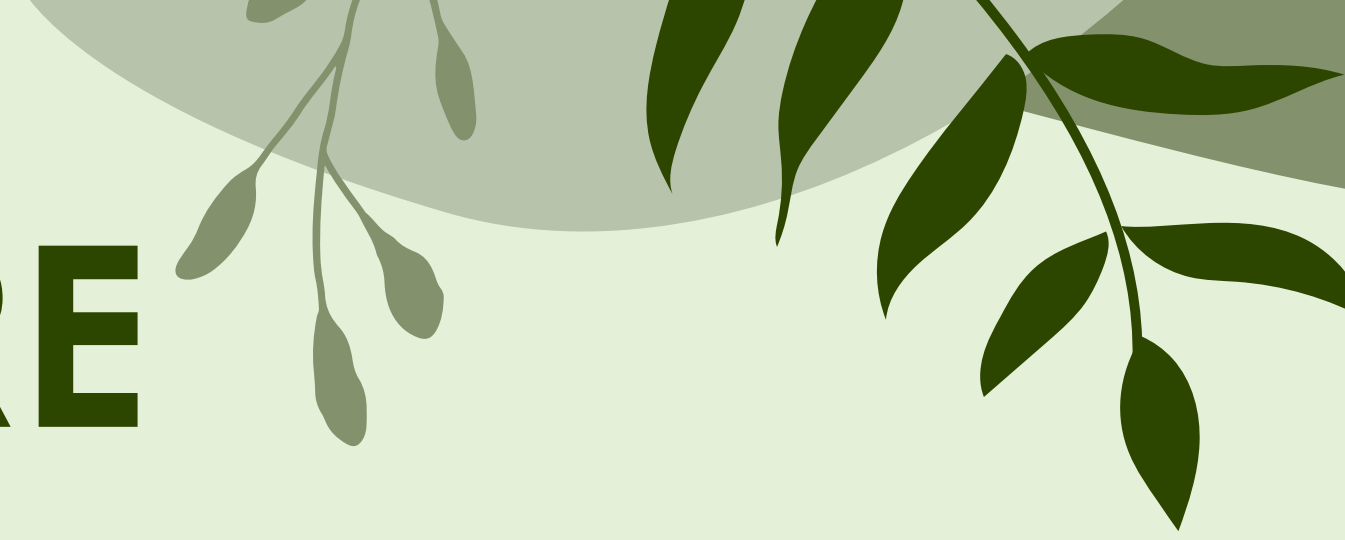

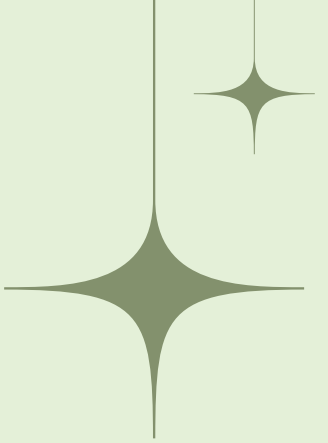

To understand:

- Event handling

- DOM manipulation

- JavaScript functions

HTML STRUCTURE

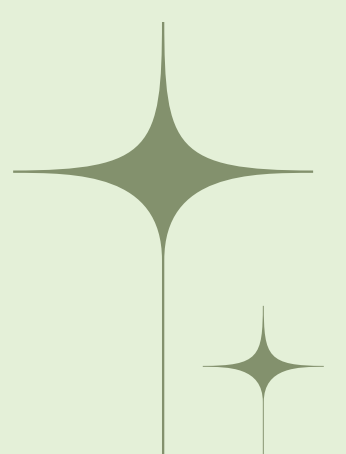

Defines the layout of the calculator

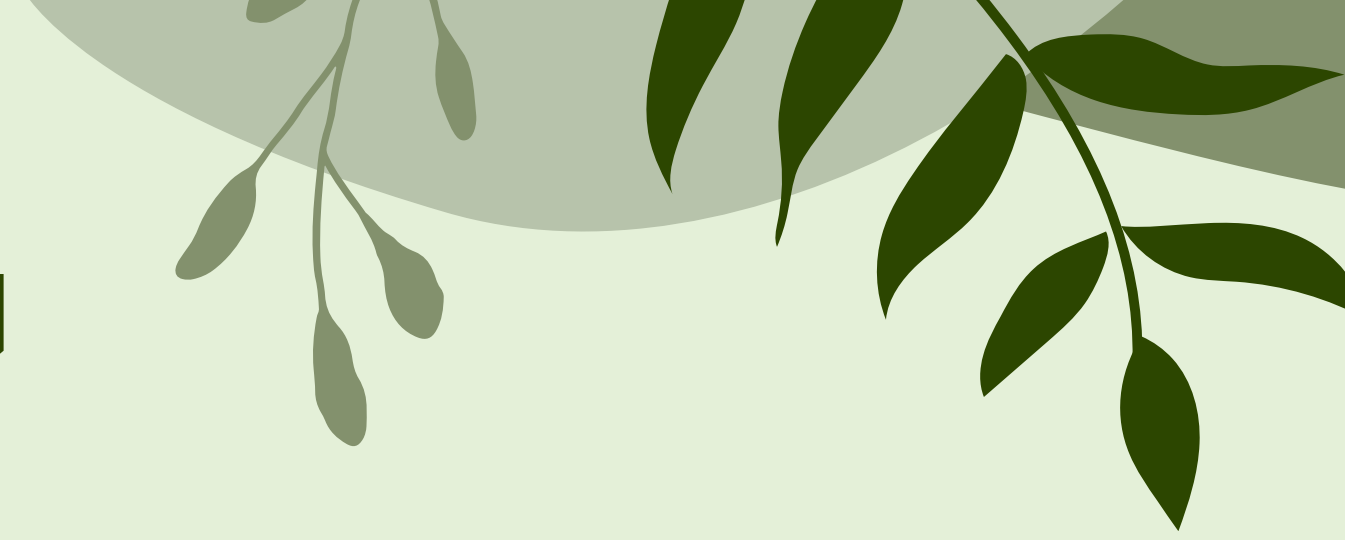

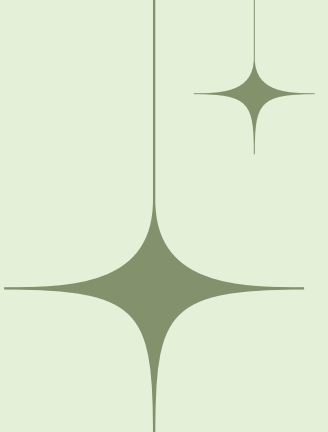

Important elements:

`<div>` → Container

`<input>` → Display screen

`<button>` → Numbers & operators

CSS STYLING

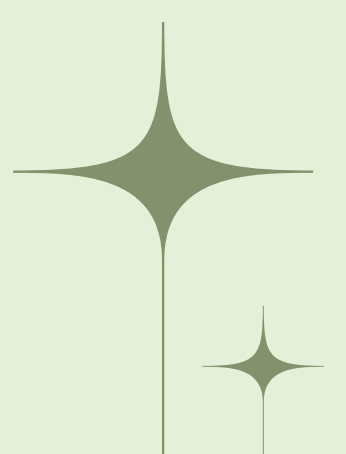

Used to improve appearance

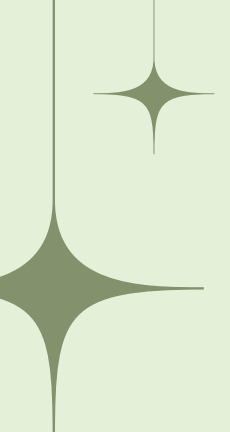

Features:

Centered calculator

Box shadow for design

Styled buttons

JAVASCRIPT FUNCTION

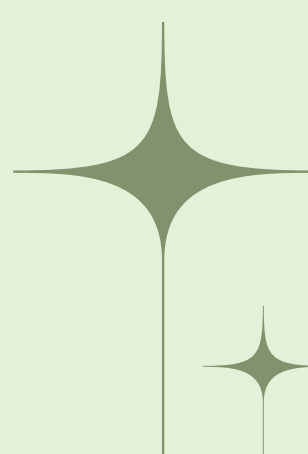

Adds functionality to calculator

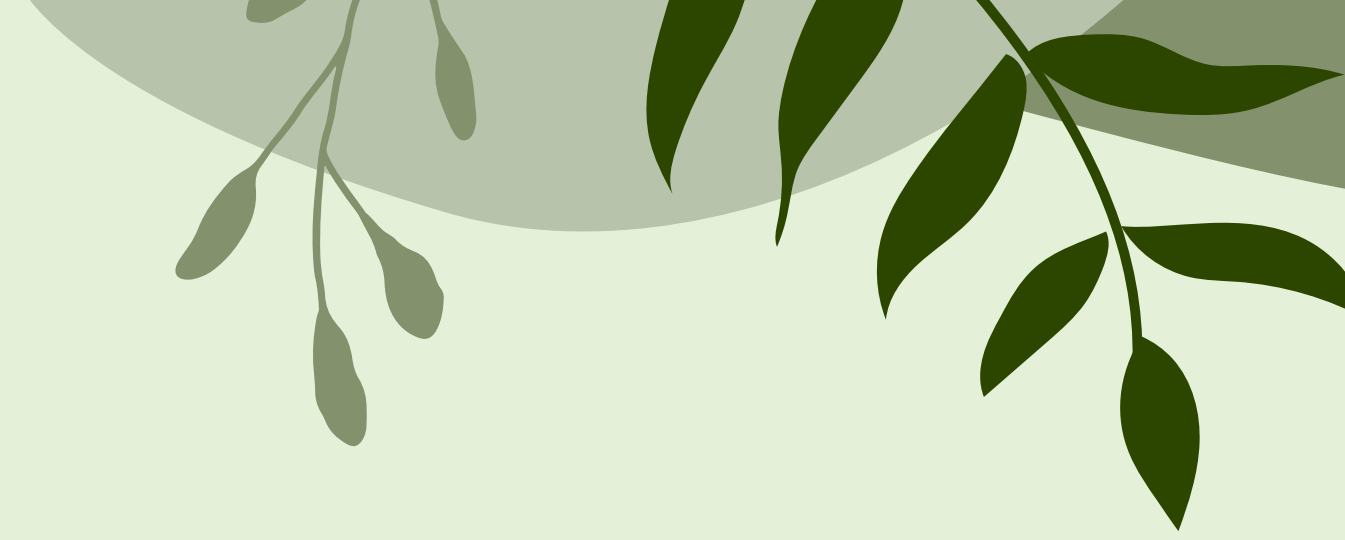

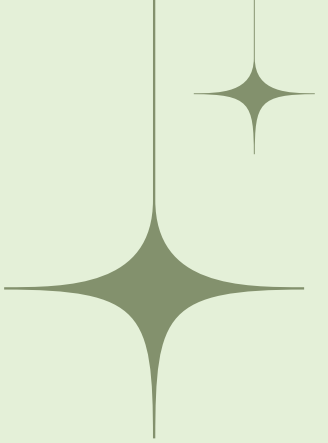

Functions:

`insert(value)` → adds input

`clearDisplay()` → clears screen

`calculate()` → computes result using `eval()`

CONCLUSION

Simple calculator helps understand web basics

Combines HTML, CSS, and JavaScript

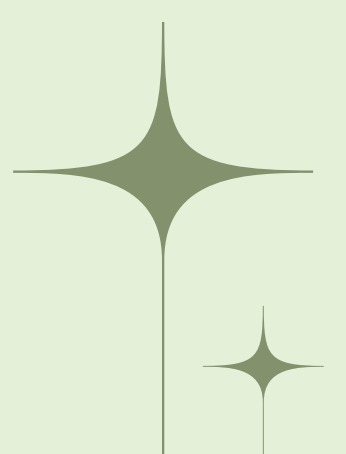

Easy to build and useful for beginners

Future improvements:

- Scientific calculator

- Better UI

- Error handling

**THANK
YOU**
